

"Transitioning your data to information!"

Compli-Trak

Overview

TransitionWorks Software's Compli-Trak solution is unique in its ability to utilize multiple technologies autonomously or simultaneously, including biometric identification, RFID, and/or barcode. A biometric reader can recognize an inmate's fingerprint, providing a verifiable form of inmate identification (especially useful when dispensing medications, court appearances, dangerous commissary items, or as a signature alternative). The system is customizable to meet the needs of your institution. User defined data fields are available for facility specific information. A graphical user interface (GUI) map allows authorized personnel to view an inmate or guard's last known location on a visual blueprint of the facility. In addition, to an audit trail of all previous locations Compli-Trak is a web based application enabling users to control their facilities without boundaries, supplying security and control even during those times when you cannot physically be in the building. Personnel with authorized security access can log-in to the system from any web browser, including a PC, PDA or Smart Phone. Compli-Trak improves efficiency, accelerates inmate processing and provides you with a reliable system to manage day-to-day requirements.

TransitionWorks for Tracking Compliance (Compli-Trak)

Correctional facilities are obligated to comply with governing guidelines. Compli-Trak monitors activities, including inmate's daily exercise, guard's daily rounds, suicide checks, medication dispensing, transfers, head counts, safety equipment audits, etc., yielding precise record management. TransitionWorks Software's Compli-Trak provides an audit trail of inmate activity, automated documentation of security checks and other daily inmate occurrences. This automatically collected data is transformed into usable, real-time information, which greatly reduces time consuming manual data entry, costly lawsuits, and non-compliance fines. Compli-Trak is compatible with current jail, record or other inmate management systems.

It starts in booking where new arrivals are processed. They are issued armbands or ID Cards fitted with their photo, a barcode and/or RFID tag containing the pertinent inmate information. That information may include cell assignment, medical prescriptions, recreational activity time allotment, and/or personal property collected. An inmate's risk level and gang affiliations can also be stored. With a handheld scanner or via an RFID portal, an inmate's activity can now be tracked, including where they go, when they eat, medication dispensed, transfers to/from courts and other facilities, head count presence, recreational activity time, commissary supply items assigned, and behavior.

RFID Automation

RFID changes the scope of inmate tracking making it possible to perform armband reads with a single scan instead of visual counts. Utilizing RFID technology, portal reads of large groups are also possible permitting headcounts to be conducted with handheld readers or via walk through portals. Portals can also be effectively used to accurately record transfers to/from court, to the cafeteria or any other doorway/entrance to an area that requires documenting who/when someone passed through. Automating these procedures saves valuable time, and yields greater regulatory compliance and accuracy.

About TransitionWorks Software

TransitionWorks Software is dedicated to helping our customers improve efficiencies and simplify business processes. Since product inception in 1997, our TransitionWorks Software organization has accomplished this goal by iteratively developing, delivering and supporting a set of solutions that help companies and government entities simplify and automate key business processes using many forms of Automated Identification and Data Capture (AIDC) technologies including RFID, barcodes, sensor technology, and PLC's. With proven, successful implementations world-wide, TransitionWorks' premier solutions are the system of choice for many leading companies in the world.

TransitionWorks Software State and Local Government Solutions:

Compli-Trak
Evidence-Trak

Inmate Property-Trak
Asset-Trak

Employee/Visitor Evacuation
Entrance and Gate Control
