

## Entrance Monitoring and Evacuation

### Overview

The September 11, 2001 terrorist attacks increased awareness worldwide of the need to be prepared for disasters and emergencies. The attacks prompted many individuals responsible for people in office buildings to re-evaluate their disaster and evacuation plans for all occupants. We never know when an emergency situation will occur. Integrating TransitionWorks Entrance Monitoring and Evacuation Solution will ensure you account for all employees, contractors and visitors.

### Key Benefits

- Track your most valuable assets - people
- Smart phone, PC or mobile device access
- Efficient badge issuance process
- Location reporting/search capabilities
- Graphical mapping on your floor plan
- Use reports for time and attendance
- Optional Video integration with timestamp

### TransitionWorks for Entrance Monitoring and Evacuation

Evacuation situations call for the immediate accounting of personnel and visitors to ensure personal safety. In the event of an emergency, evacuees can range from a few to thousands and not one can be left behind. TransitionWorks Entrance Monitoring and Evacuation Solution tracks employees, contractors and visitors, providing verifiable accountability of all occupants.

An employee would be assigned a personnel badge when employed. Upon entrance into the facility, administrative personnel would obtain the Contractor's/Visitor's fingerprint and enter their contact information along with work station, or department visiting. When all the required information is gathered, an active RFID badge, assigned to that individual, is issued. Active badges with a panic or distress button are also available.

#### TransitionWorks Entrance & Evacuation Solution

Disaster and emergency planning is an activity that should be integrated into our lives (the same way we are encouraged to check our smoke alarm batteries when we change the clocks for daylight savings time).

Utilizing Active RFID, antennas placed at each entrance and exit track when someone enters/leaves the building. RFID readers are also posted at each external muster point to verify the evacuees present during an emergency. Persons not detected at muster points and not identified as having exited, would be assumed to be in the building. Evacuation managers would receive a notification of any unaccounted persons and the work station/department visiting via text message or e-mail.

### **About TransitionWorks Software**

TransitionWorks Software is dedicated to helping our customers improve efficiencies and simplify business processes. Since product inception in 1997, our TransitionWorks Software organization has accomplished this goal by iteratively developing, delivering and supporting a set of solutions that help manufacturing/distribution companies simplify and automate key supply chain processes using many forms of Automated Identification and Data Capture (AIDC) technologies including RFID, barcodes, sensor technology, and PLC's. With proven, successful implementations world-wide, TransitionWorks' premier solutions are the system of choice for many leading companies in the world.
